

DORABABU PINDI

.NET Full Stack Developer | API & Backend Architecture | SQL Server Performance | DevOps & Release Automation

Visakhapatnam, Andhra Pradesh, India | +91-9848365784 | dorababupindi@gmail.com | linkedin.com/in/dorababu-pindi

PROFESSIONAL SUMMARY

.NET full stack developer with **3.5+ years building and maintaining a production enterprise security platform (DashMagiq)** end to end from C# REST APIs and SQL Server data layers through to ASP.NET MVC dashboards, **deployed into multiple enterprise customers including major Indian banking and IT-services accounts**. Processes high-volume DLP alert data (~1L+ alerts/day per source) across Trellix ePO (On-Prem & SaaS), Microsoft Purview, Symantec, Forcepoint and Zscaler. Strong in **API & backend architecture, T-SQL and SQL Server internals** with a track record of turning slow legacy code into measurably faster systems, including query plans optimised from **100k-row scans down to single-row index seeks**. Drove the team's **DevOps maturity from zip-file sharing to a multi-repo Azure DevOps release orchestrator**. Earlier career as a process engineer in pharma and oil & gas brings disciplined root-cause analysis to every system I work on.

TECHNICAL SKILLS

Languages	C#, T-SQL / SQL Server, JavaScript, TypeScript, HTML5, CSS3
Backend & API	.NET Framework, ASP.NET Web API, REST, SOAP, OData, Entity Framework, JWT / OAuth 2.0, CQRS, layered architecture
Frontend	ASP.NET MVC, Razor views, jQuery / AJAX, Bootstrap, ASP.NET Core, Blazor
Database	SQL Server (execution-plan analysis, index design, heap-to-clustered conversion, deadlock resolution, query parameterisation), SSMS, stored procedures, DACPAC
DevOps	Azure DevOps (multi-repo pipelines, release orchestration, self-hosted agents, REST API), Git (branching, PR workflow), IIS deployment, PowerShell
Integration	Microsoft Graph API, DLP platforms (Trellix ePO On-Prem/SaaS, Microsoft Purview, Symantec, Forcepoint, Zscaler), Selenium RPA, Postman
Practices	Performance tuning, refactoring legacy code, root-cause analysis, Windows Authentication, secure-deployment handling
Domains	Security & DLP Systems, Process / Pharmaceutical Manufacturing

PROFESSIONAL EXPERIENCE

Senior Software Developer

Aug 2022 – Present

Vidiatech Solutions Pvt Ltd · Kochi & Kozhikode (Hybrid)

Lead backend & API architecture, SQL Server performance, and release engineering on DashMagiq - a multi-DLP security-incident remediation platform - while owning the full database layer and serving as primary technical contact across multiple concurrent enterprise customer engagements.

Backend & API Architecture

- Designed, built and maintained **C# / .NET Framework REST APIs, data-processing services & MVC Dashboards** that ingest, normalise and route large volumes of security-event data across multiple DLP sources, and present it through the centralised platform.
- **Integrated multiple DLP platforms** - Trellix ePO (On-Prem & SaaS), Microsoft Purview DLP (via Microsoft Graph API), Symantec, Forcepoint and Zscaler through API-driven ingestion and normalisation pipelines.
- Applied **layered architecture and clean refactoring**: eliminated redundant config fetches, extracted a reusable SQL-building helper method to remove duplicated pagination logic, and improved naming and readability with no behavioural change.
- Built backend utilities including an **Azure Storage URL parser** (account/container/blob extraction) and integrating with secure banking-grade APIs used by a major Indian financial institution.

SQL Server Performance & Database Engineering

- **Diagnosed and resolved critical query bottlenecks** by analysing SQL Server execution plans converting full index/table scans into index seeks and cutting rows read on hot paths from **~100,000 down to 1**, with I/O cost reduced by orders of magnitude.

- Identified and **converted high-traffic heap tables to clustered primary-key tables** incl. multi-row-count heaps, rebuilding non-clustered indexes and validating fragmentation to eliminate repeated full scans.
- Rewrote inefficient **multi-layered nested queries** generated by a C#/UMCConfig framework into flat, optimiser-friendly SQL via source-controlled views enabling **ALTER VIEW tuning without code redeployment**.
- Replaced string-concatenated SQL with **parameterised queries (SqlParameter)** to drive plan-cache reuse and removed redundant *LOWER/LTRIM/RTRIM* wrapping that was blocking index usage.
- Authored a broad **SQL Server performance playbook** covering deadlock resolution, index strategy, query hygiene and stored-procedure best practices, adopted as a team reference; explored **DACPAC deployment** for locked-down customer environments.

DevOps & Release Automation

- **Led the team's end-to-end DevOps transformation** - migrating from zip-file-over-OneDrive code sharing to Git-based source control, a branching/PR workflow, and full Azure DevOps pipelines.
- **Designed and built a multi-repo release orchestrator** spanning four repositories. When manually triggered, it builds all repos in parallel via the Azure DevOps REST API, collects per-repo changelogs from Git tags, and assembles a single **SemVer-versioned release bundle** with a manifest for the support team.
- Configured **self-hosted Windows build agents and a dedicated agent pool** to avoid Microsoft-hosted parallel-job limits, and automated post-release Git tagging and version-variable updates across all repos.
- Introduced **SemVer discipline** to replace ad-hoc versioning, giving the support team unambiguous release identification for manual customer deployments.

Full Stack Delivery & Automation

- Worked across the stack on DashMagiq's **ASP.NET MVC dashboards and SOC UI** - JavaScript, jQuery/AJAX and data-driven views wiring frontend tables, filters and pagination to the optimised backend APIs.
- Built **Selenium-based RPA automation** for false-positive remediation — auto-adding/removing users from ePO exemption groups with scheduled expiry — and contributed to an AI-assisted **RPA repair mode** that lets non-technical users fix and optimise RPA scripts.
- Partnered with **security engineers, infrastructure teams and customer stakeholders** (incl. TechMahindra) on requirements analysis, production-deployment coordination and root-cause investigation of production issues.

Process Engineer

Jul 2019 – Jan 2022

Aurobindo Pharma Pvt Ltd · Hyderabad & Visakhapatnam

- Performed **root-cause analysis on process deviations**, correlating operating parameters (temperature, pressure, flow) with product-quality metrics.
- Extracted and analysed batch-production data; built **automated Excel/VBA dashboards** to track yield, throughput and equipment KPIs and support operational decisions.
- Collaborated with production, QA and engineering teams on data validation and continuous-improvement initiatives.

Process Engineer (Intern) - HPCL-Mittal Energy Ltd

May 2018 – Jun 2018

- Industrial training in Sulphur Recovery (SRU) and Tail Gas Treating (TGTU) units; studied refinery process flows, plant instrumentation and process-control systems.

EDUCATION

B. Tech, Petrochemical Engineering

2015 – 2019

Jawaharlal Nehru Technological University, Kakinada, Andhra Pradesh

CERTIFICATIONS

- **Google Data Analytics Professional Certificate** - Coursera
- **C# Certification** - FreeCodeCamp
